BBU-300 POTSwap™ Battery Back-Up

Description

The BBU-300 (Janus part number MC-0432) is a general purpose 12V DC battery backup module for use with the Janus LTE910PS POTSwap. It is typically used where power continuity must be maintained for short periods of time when standard power is not available. When fully charged, the battery back-up can deliver 300mAh at approximately 9V. The length of time the BBU-300 can deliver this power depends on the current draw of the connected LTE POTSwap.

The BBU-300 is connected in-line with the standard 12VDC power supply for the POTSwap. This charges the battery while at the same time supplying 12VDC power to the POTSwap. If the main power supply should fail, the BBU-300 output voltage drops to approximately 9VDC and can operate the POTSwap while standard power is restored.

Features

- Provides Backup Power for the LTE POTSwap
- Power Input: 12VDC
- Power Output: 9-12VDC
- Reverse Polarity Protected
- Standard Barrel Connectors (Female Jacks) (2x) 2.1mm ID x 5.5mm OD
- 12" Output Power Cable included with Barrel Connectors.

Applications

- Waste Water Treatment Plants
- Lift Stations
- Marine telephones
- Mobile office trailers
- Elevator telephones
- Public School Districts

Specifications

- Input: 12VDC, 2A max.
- Output: 12VDC, 2A max. (while input power is present)
9VDC, 500mA max. (while under battery power)
- Reverse Polarity Protection: Yes
- Battery Type: NiMh
- Battery Capacity: 300mAh

Note: Upon installation, the Battery Back-up should be charged for at least eight hours before a full back-up charge becomes available.
