Subject: EOL Notification for all Telit CC864-DUAL based Janus Terminus Products

Telit recently announced the EOL and last time buy of CC864-DUAL CDMA modules used in Janus CDMA products. Janus regretfully, in turn, announces the End Of Life of the following Terminus products: CDMA864D, CDMA864CF, CDMA864T2, CDMA400AP products. However, we will continue to build these devices as long as module supplies are available. And, we will make every effort to support these products for our existing customers as long as possible. We expect to continue supporting CC864-DUAL based Terminus devices through 2015.

Our **Last Time Buy** (LTB) service is extended to customers who acknowledge the end of life (EOL) notice by placing orders for a final quantity of material. Customers are asked to procure material to cover their future requirements with this LTB. The LTB date is the deadline or cutoff date to have received a Purchase Order (PO).

LTB (Last Time Buy Order): February 1st, 2015 or as long as materials are available

Product Replacement

The Janus Terminus product family includes several products that cover a broad range of performance and feature options. Since the CC864-DUAL based Terminus products have entered the EOL lifecycle phase, Janus suggests that customers consider using similar products available from the same product family as replacement. Janus is pleased to suggest the new Telit CE910-DUAL module based replacement devices:

Current EOL Models

CDMA864CF
CDMA864T2
CDMA400AP v2.0
CDMA400AP v3.0
CDMA400AP v4.0

Replacement Models

CDMA910CF or EVDO910CF
CDMA910T2 or EVDO910T2
CDMA400AP v5.0 (Sprint) or EVDO400AP v2.0
CDMA400AP v6.0 (Verizon) or EVDO400AP v3.0

Information regarding those products can be found at our website:
