From: Janus Remote Communications

Subject: EOL Notification for all EVDO910CF Janus Products

Telit Communications recently announced the End-Of-Life and last time buy of their DE910-DUAL modules used in Janus EVDO910CF Embedded Modems. Janus Remote Communications regrettably, in turn, announces the End of Life of our EVDO910CF v2.00 and EVDO910CF v3.00 products. However, inventory of the components needed to build these devices has been secured and we will make every effort to ensure support for these products to our existing customers for as long as is possible. We expect to continue offering and supporting EVDO910CF devices well into 2018.

Last Time Buy (LTB) service is extended to customers who acknowledge the end of life (EOL) notice by placing orders for a final quantity of EVDO910CF devices. Customers are asked to procure units to cover their future requirements with this LTB. The LTB date is the deadline to receive a Purchase Order (PO) for EVDO910CF devices.

LTB (Last Time Buy Order): December 1st, 2017.

Product Replacement

Janus Remote Communications product family includes several products that cover a broad range of performance and feature options. Since the EVDO910CF products have entered the EOL lifecycle phase, Janus suggests that customers consider using a higher performance product available from the same product family as a replacement.

Janus is pleased to suggest one of our LTE910CF 4G products. Information regarding those products can be found at our website:
