To: Janus GE865-QUAD based Terminus Customers

From: Janus Remote Communications

Subject: EOL Notification for all Telit GE865-QUAD based Janus Terminus Products

Telit recently announced the EOL and last time buy of the GE865-QUAD GSM module version used in Janus PTCRB and AT&T certified GSM865 products. In turn, Janus regrettably announces the End of Life of the following Terminus products: GSM865CF, GSM400AP, and GSM865T2. We will continue to build these devices as long as module supplies are available. And, we will make every effort to support these products for our existing customers as long as possible. We expect to continue supporting GE865-QUAD based Terminus devices through 2015.

Our **Last Time Buy** (LTB) service is extended to customers who acknowledge the end of life (EOL) notice by placing orders for a final quantity of material. Customers are asked to procure material to cover their future requirements with this LTB. The LTB date is the deadline or cutoff date to have received a Purchase Order (PO).

LTB (Last Time Buy Order): May 1st, 2015 or as long as materials are available

Product Replacement

The Janus Terminus family includes several products that cover a broad range of performance and feature options. Since the GE865-QUAD based Terminus products have entered the EOL lifecycle phase, Janus suggests that customers consider using similar products available from the same product family as replacement. Janus is pleased to suggest Telit HE910 module based Terminus replacement devices for current requirements. The HE910 is a penta-band device capable of operation on GSM/ GPRS, EDGE, UMTS, and HSPA networks. Replacement device suggestions are as follows:

Current EOL Models

GSM865CF
GSM865T2
GSM400AP

Replacement models

HSPA910CF
HSPA910T2
HSPA400AP

Information regarding these products and others can be found at our website:
