

**Good News! The Verizon LTE POTSwap Standard Kits
(LTE910PS V3.00 TAUVN)
will begin shipping the first week of November!**

Verizon Notes:

*The current version of the Janus LTE POTSwap, **LTE910PS v3.00 TAUVN**, cannot be used to dial 911. It will require a firmware update sometime in Q4 or Q1 2021, which will happen after release of our cellular module provider's newest certified firmware version. The new firmware will add 911 calling capability.*

- *Customers can expect that a FOTA (Firmware-Over-The-Air) update will be performed on **LTE910PS V3.00 TAUVN** devices during the overnight hours sometime after we have received our supplier's new firmware version, in Q4 2020 or Q1 2021.*
- *The update and reboot should take no more than 15 minutes and require 20 Mb of data. After reboot the unit should be 911 capable.*
- *This update is mandatory per Verizon.*

*Customers that require 911 calling capability should wait for release of the next version of the POTSwap, **LTE910PS V3.00 TBUVN**. That version will be 911 capable and should be available late in Q4 2020.*
