Janus Remote Communications Announces PTCRB and AT&T certification of their new LTE POTSwap – POTS to Cellular Voice Gateway

Aurora, IL – Janus Remote Communications, an industry leader in the design and manufacture of precision IoT products and solutions, is pleased to announce the PTCRB and AT&T certification of their next generation POTSwap. The Janus LTE910PS POTSwap allows users to replace analog (copper) phone lines, also called POTS (plain old telephone service) or PSTN (public switched telephone network), with a cost-competitive POTSwap unit and cellular voice and data plans. The POTSwap converts fixed location landlines to cellular enabled fixed or mobile implementations.

Integrating Telit's LE910C1-NF LTE module as their cellular engine, the LTE910PS units operate in LTE bands 2, 4, 5, 12, 13, 14, 66, 71 with fallback to HSPA+ bands 2, 4, and 5. North American carriers include: AT&T, T-Mobile, and Verizon. Rogers, Bell and Telus versions will be available soon for Canadian customers.

Installing a POTSwap is the easiest way to switch legacy equipment from traditional phone landlines to a 4G LTE network. The existing phone line is connected directly to our POTSwap. Simply unplug the telephone jack from its wall outlet and plug it into the POTSwap's RJ11 socket. Insert the appropriate SIM card into the back panel of the unit.

Janus offers carrier voice and data plans in support of the LTE POTSwap. Equipment lease options are available to qualified customers.

About Janus

Janus Remote Communications provides state-of-the-art wireless products and services as well as custom design solutions for the global IoT marketplace: www.janus-rc.com. Janus solutions are widely used by customers in the areas of asset, process, facility and energy monitoring and control; health, safety and security; and in a host of commercial wireless products. Janus is a division of Connor-Winfield Corporation: www.conwin.com.
