Elevator Telephone Line Replacement Introducing the 4G LTE POTSwap POTS Replacement

Are you or your customers paying a monthly charge for copper telephone lines and paying extra for services as well?

Upgrade old analog elevator phone lines to a cellular connection with the Janus LTE910PS POTSwap and begin immediately saving 30 to 60% on your monthly bills. Just plug your current elevator phone into the POTSwap's RJ-11 jack and begin saving the monthly cost of unreliable and increasingly difficult to support twisted pair copper lines.

The **POTSwap Unit** allows any current landline telephone to replace their POTS (plain old telephone service) connection with a wireless cellular service (available from Janus). Fixed location voice applications can connect directly to the PSTN (Public Switched Telephone Network). And, both dial-in and dial-out voice applications are supported. Mount the POTSwap on the carriage, in the mechanical room, or any location that best suits your elevator configuration. The POTSwap requires a DC power supply of 7-15 volts, two LTE antennas, A GPS antenna, and any required cabling. POTSwap accessories kits are available in two different options: Standard and Premium.

POTSwap STANDARD Kits include a LTE POTSwap, 2 LTE monopole antennas, a GPS antenna with 3 meter cable, wall mount power supply, and a Quick Start Guide.

POTSwap PREMIUM Kits include a LTE POTSwap, MIMO/GNSS antenna with 3 meter cable, 3 lightning arrestors with patch cables, 30' Grounding Wire 12AWG, wall mount power supply, and a Quick Start Guide.

Other Applications

- Emergency Phone Kiosks
- Broadcast Trucks
- Marine Telephones
- Mobile Office Trailers
- Gate and Door Access
- Public School Districts

See Website for Current LTE POTSwap Product and Services Options

Janus offers customers the opportunity to circumvent the capital expenditure cost of hardware with our POTSwap lease program. Find the payment schedule on our website that fits with your particular financial requirements.

Janus also offers cost competitive voice and data plans for use with the LTE910PS POTSwap units.
