## **NavTrac Combines GPS Technology with Wi-Fi Transport**

**Aurora, IL** – NavSync, Ltd. announces the release of their NavTrac. NavTrac integrates a unique low-signal strength GPS receiver with an 802.11 transmitter to provide location broadcasts over Wi-Fi.

NavTrac can be embedded or packaged in any device that needs to broadcast its location to tracking units equipped with 802.11 receivers. Because of the unique capabilities of the CW20 GPS receiver, NavTrac does not need to have a clear view of the sky to attain GPS lock and accurate position information. NavTrac is available as an open board, embedded solution or in an enclosure. Additionally, the 802.11 supports WPA2 encryptions and is fully configurable to a specific network.

In addition, NavTrac can be offered as a component within a broader, custom asset tracking solution developed by Janus Remote Communications ([janus-rc.com](http://janus-rc.com)).

Price: \$182 each – 100 piece quantity
